human alpha 1-6 fucosyltransferases of the invention, respectively. The encoded enzyme transferases of the invention, respectively. The encoded enzyme transfers fucose from guanosine diphosphate to the encoded enzyme transfers fucose from guanosine diphosphate to the encoded enzyme respect molecule:

C. GlcNacbeta 1-2Manalpha 1-6) (GlcNacbeta 1-2Manalpha 1-3) Manbeta
C. 1-4GlcNAcbeta 1-4GlcNAc-R to give (GlcNacbeta 1-2Manalpha 1-6) (GlcNacbeta 1-4GlcNacheta 1-4GlcNacheta 1-4GlcNacheta 1-4GlcNacheta 1-6GlcNac-R. It has an optimum pH of about 7.0 (pig) or 7.5 (human), and is stable over the can optimum pH of about 7.0 (pig) or 7.5 (human), and is stable over the can enzyme is 30-37 degrees C. The optimum working
C. temperature of the enzyme is 30-37 degrees C. A bivalent metal is not required for activity of the enzyme, and the enzyme is not inhibited in the protection of sugar chains, and as antigen for the production of antibodies recognising the enzyme. The antibodies can be used for the carper and other diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    156

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        732
                                                                                                                                                                                                                               The invention relates to a plant cell with an animal type sugar chain adding function, created by transforming a tobacco cell with a gene encoding an enzyme derived from an animal which can transfer a fucose residue to the reductive end acetylglucosamine residue of a sugar chain. The gene that is introduced into the plant cell encodes the enzyme alphal, 6-fucosyl transferase. The method of the invention is useful for the preparation of a glycoptcein having animal type sugar chain. The current sequence represents alphal, 6-fucosyl transferase cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GCGGGAAAAAGGGCCCAAAGATCTGACAGAACTGGTTCAGCGGAGAATAACATATCTTCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      840
                                                                                                                                                                                                                                                                                                                                                                                                                          9
N-acetylglucosamine residue at the reducing end of the sugar chain on the immunologically functional molecule. The invention also relates to methods for the diagnosis, prevention or treatment of diseases which involve the modified immunologically functional molecule, and agents which stimulate the activity of an immunologically functional molecule. The methods of the invention are used for the diagnosis, treatment and prevention of a broad range of diseases including cancer, circulatory disease, viral or bacterial infection, allergy, autoimmune disease and inflammation. The present sequence represents a Chinese hamster FUT8 cDNA isolated in an exemplification of the invention.

The produced antibody compositions are drugs for prevention or treatment of diseases accompositions are drugs for prevention or treatment of diseases, circulatory diseases, and viral and bacterial infections. The antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety and reduced side effects when applied alone or in combination with other molecule used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                               Immunologically functional molecule; immune system; immunomodulation; glycosylation; fucose; N-acevylglucosamine; cancer; dirculatory disease; viral infection; bacterial infection; allergy; autoimmune disease; inflammation; antibody; rat; FUT8; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method for controlling the activity of an immunologically functional molecule (e.g., an antibody) where the control is effected by the presence or absence of fucese bound to an N-acetylglucosamine residue at the reducing end of the sugar chain on the immunologically functional molecule. The invention also relates to methods for the diagnosis, prevention or treatment of diseases which involve the modified immunologically functional molecule. The methods of the activity of an immunologically functional molecule. The methods of the invention are used for the diagnosis, treatment and prevention of a broad range of diseases including cancer, circulatory disease, viral or bacterial infection, allergy, autoimmune disease and inflammation. The present sequence represents a rat FUT8 cDNA isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Control of activity of antibodies and other immunologically functional molecules by addition or removal of fucose from sugar chain for diagnosis and treatment of cancer, allergy and other diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 ACTCATCTTGGAATCTCAGAATTGGCGCTATGCTACTGGTGGTGGAGACTGTGTTTAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                          This invention relates to novel method for antibody production comprising a Chinese hamster ovarian tissue-originated (CHO) cell transferred with a gene encoding an antibody molecule for producing a composition comprising an antibody molecule with an Fc domain bonded to the N-glycoside linkage complex sugar chain. The produced antibody compositions are drugs for prevention or treatment of diseases accompanying tumour, allergy or inflammation, autoimmune diseases, circulatory diseases, and viral and bacterial infections. The antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety and reduced side effects when applied alone or in combination with other molecule used in the method of the invention.

transferase) antibody. Also described are: (1) a hybridoma producing the above monoclonal antibody; (2) an immunoassay for detecting human alpha 1-6 fucT by using the above antibody or its antibody fragment; and (3) a reagent used for the above immunoassay. The anti-human alpha 1-6 fucT antibody can be used for immunoassay. The present sequence encodes the human alpha 1-6 fucT protein of residues 237 to 575, which is used in an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an anti-human alpha 1-6 fucose fucosyltransferase (alpha 1-6 fucT, also called alpha 1-6 fucose transferase) antibody. Also described are: (1) a hybridoma producing the above monoclonal antibody; (2) an immunoassay for detecting human alpha 1-6 fucT by using the above antibody or its antibody fragment; and (3) a reagent used for the above immunoassay. The anti-human alpha 1-6 fucT antibody can be used for immunoassay. The present sequence encodes the human alpha 1-6 fucT protein of residues 343 to 575, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 GAAAAAAGAAATAGAAAGAAGCCACCACCAAGAAGCTTGGAAGTTCAAACATCCAGTTATTGGAGTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              871
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     931
                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL10511), expressed DNA sequences (ABL16176-ABL10511), expressed DNA
isolated nucleic acid detection reagent for detecting 1000 or more es from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGCGGACGCTCATCTJAAAATCCCGGGGATGGCGGTATCACAAGGGCGGCTGGGAGGAGGAGG
